

Enterasys Centralized Command and Control

NetSight® provides highly graphical, easy-to-use tools to unlock the value of Secure Networks™

Customer Benefits

- Implementation planning by subject matter experts experienced in the design and deployment of NetSight applications
- Efficient installation of new products with minimal disruption to IT and business operations
- Hands-on product implementation by a certified professional to provide the knowledge needed to understand the solution and its functionality, as well as customer support contact methods
- Together with Enterasys' intelligent infrastructure solutions, NetSight protects the network from security breaches, hacker attacks and corporate espionage
- NetSight intuitively pinpoints potential problems or trouble areas before they affect network performance and takes action to resolve them, saving IT staff time, keeping the user population productive and improving the bottom line
- Traffic and application control conserves bandwidth, enabling you to get the most out of your existing infrastructure investment
- Simplified security administration protects and optimizes the enterprise while reducing operational costs across the board

An integral part of an enterprise network, NetSight management applications unlock the benefits of Enterasys solutions and open the door for customized company-managed networks. NetSight provides real-world solutions through intuitive, scalable configuration and management tools designed to provide a solid return on investment for your organization. NetSight moves beyond simple device control to a business and policy management focus. In addition, NetSight provides application-aware bandwidth management with Quality of Service and prioritization, ensuring that everyone, including corporate users and on-line customers, gets the bandwidth they need when they need it.

Enterasys Professional Services and our certified partners are subject matter experts and have experience integrating NetSight management applications onto Enterasys network infrastructures. We will work directly with your network specialists to plan, design, implement and operate your network using NetSight management applications.

End-to-End Solutions and Expertise

We deliver service in a phased approach that begins with an assessment of the current environment—people, process, business and network issues—and moves through the phases of designing, implementing, migrating and managing a customized network to meet your unique requirements.

Scope of Service

- Meet with enterprise network staff to define overall deployment goals
- Collect applicable network designs, configuration and IP management information for NetSight deployment
- Collaborate with enterprise network staff to determine installation locations for NetSight applications
- Agree on the final installation and deployment verification checks to validate fully operational NetSight applications
- Determine installation and full deployment milestone dates
- Implement the agreed upon design
- Provide configuration and operational training on NetSight applications and specific features to IT staff who will manage the health of the network and control its operation from a centralized location
- Perform final installation and deployment verification checks
- Provide consultation on implementation of default acceptable use policy
- Provide consultation on “Plug-In” applications, such as Automated Security Manager, which can be integrated into NetSight
